NIRANJAN PATIL

+91 9284774471 | pvt.niranjan10@gmail.com | linkedin.com/in/niranjanpatil10 | github.com/10Niranjan

Full-Stack and Mobile Application Developer with hands-on experience building RESTful APIs, scalable backend services, and cross-platform mobile applications, alongside agentic AI and LLM-integrated systems. Proficient in Java, Spring Boot, and Flutter, crafting intuitive and performant mobile apps for both Android and iOS. Experienced in designing secure backend architectures, implementing event-driven systems using Apache Kafka, and integrating LLM-based orchestration and human-in-the-loop workflows into production systems. Comfortable working in Agile environments and passionate about building impactful, user-centric products.

SKILLS

- **Agentic AI & RAG:** LangGraph, LangChain, Multi-Agent (ReAct) Architectures, Tool-Augmented Reasoning, Agent Orchestration, Retrieval-Augmented Generation, pgvector (HNSW), Embeddings
- **LLM Integration:** LLM Orchestration (OpenAI GPT-4o-mini, Google Gemini), Prompt Engineering, Function/Tool Calling, Structured Output (Pydantic)
- **Workflow Design:** Human-in-the-Loop (HITL) Review Workflows, Persistent State Checkpointing
- **Programming Languages:** Java (8, 17, 21), Python, TypeScript, Dart, SQL, JavaScript, HTML/CSS
- **Frameworks:** Spring Boot 3/4, Spring MVC, Spring Data JPA, Spring Security, FastAPI, React.js, Redux Toolkit (RTK Query), Material UI, Flutter
- **Backend & APIs:** REST API design, OpenAPI/Swagger, JWT, OAuth2, Rate Limiting, WebSockets, Firebase
- **Databases:** PostgreSQL, Neon, MySQL, MongoDB, Redis, Flyway migrations, SQL query optimization
- **Messaging:** Apache Kafka (event-driven architecture)
- **Testing & DevOps:** JUnit 5, Pytest, Docker, Docker Compose, GitHub Actions CI/CD, OWASP ZAP, k6 load testing, Git/GitHub, Postman, Jira, Agile/Scrum
- **Cloud & Tools:** Vercel, Oracle Cloud (VM deployment), Microsoft Azure, Linux, Distributed Systems, Logging and Monitoring, Android Studio, VS Code

WORK EXPERIENCE

GenAI Software Developer, Here2Answer | Pune *September 2025 – Present*

- Engaged in a learning- and training-focused role providing practical exposure to software development practices, working on-premise with flexible hours in a collaborative team environment.
- Contributing to building and maintaining web-based application features using Java, Spring Boot, and RESTful APIs, gaining hands-on experience with real-world project workflows.
- Collaborating closely with senior developers on code reviews, debugging, and documentation to ensure high-quality, maintainable software delivery.

Mobile Application Development Intern, Incubators Systems Pvt. Ltd. | Pune *August 2024 – October 2024*

- Designed and implemented cross-platform mobile applications using Flutter and Dart, focusing on responsive UI/UX and mobile development best practices.
- Maintained existing mobile applications, testing and debugging for functionality, performance, and usability.
- Took part in team discussions and sprint planning; contributed to project documentation under the Development Head.

PROJECTS

ERGO Connect – B2B Supply-Chain Platform (Client Project, 2-Person Team) | *Java 21, Spring Boot 4, React 19, TypeScript, PostgreSQL, Redis, Docker* (code)

- Co-built a client platform connecting ERGO, its customers and suppliers across RFQ, quotation, NPD, order/production and quality workflows for 18 roles, using a modular Spring Boot monolith (build-time module-boundary test, Flyway-versioned PostgreSQL schema) and a React 19/TypeScript frontend with Redux Toolkit and RTK Query.
- Enforced two-layer access control (role check, then company/record scope) with audience-specific DTOs so competitor quotes, target prices and internal notes never leave the server, plus an append-only audit log that PostgreSQL itself refuses to UPDATE, DELETE or TRUNCATE.
- Backed by 700+ JUnit tests and GitHub Actions CI/CD; ran OWASP ZAP scans across customer, supplier and ERGO roles (0 failures) and k6 load tests that exposed unbounded dashboard and list endpoints, fixed with server-side paging; deployed to an Oracle Cloud VM with Docker, Caddy and TLS.

KnowOps AI – AI Support & Knowledge Ops Platform (2-Person Team) | *Python, FastAPI, Gemini, Neon Postgres, pgvector, Vercel* (code)

- Co-built an AI support backend for DevOps/SRE teams that answers questions from a runbook knowledge base with citations (RAG) and runs a tool-calling agent that searches docs, creates and triages incident tickets and escalates to a human; deployed on Vercel.
- Designed the pgvector retrieval path: 768-dim Gemini embeddings, HNSW cosine index, ~500-character chunks and a tuned 0.55 similarity threshold that refuses out-of-domain questions instead of letting the model guess.
- Bounded the agent loop with a fixed step budget and secured every data route with JWT, input validation, rate limiting and prompt-injection tests; 400+ offline pytest tests (no live API calls) run on GitHub Actions across Python 3.11 and 3.12.

ERGO – Employee Management System | *Node.js, Express, PostgreSQL, React.js, JWT*

- Built an enterprise-ready HRMS with role-based access control, JWT authentication, and bcrypt-hashed credentials, powering attendance, leave, and payroll workflows for a 500–1,000 employee organization.
- Designed a deterministic salary computation engine in PostgreSQL that calculates per-day pay from attendance, approved leaves, and holidays, including automated PDF payslips and Excel payroll exports.
- Engineered an idempotent, cron-scheduled leave accrual system with a full audit ledger, and deployed the app as a serverless service on Vercel, backed by 147+ automated tests.

Jyoti Traders | *Flutter, Firebase, Riverpod, Hive, GoRouter*

- Built a full-stack Flutter e-commerce app with Clean Architecture and Riverpod state management, backed by a dual-mode Firebase/Hive system that runs fully offline in simulation mode with zero rework needed once live credentials are added.
- Implemented GPS-based delivery pricing using the Haversine formula and a UPI QR payment flow, along with role-based approval workflows enforcing custom business rules like minimum order value and slab-based pricing.
- Delivered a complete admin panel with product/order management, retailer approval, and analytics dashboards, backed by 270+ automated tests (unit/widget/integration) with consistent flutter analyze cleanliness.

EDUCATION

Bachelor of Engineering in Computer Engineering *May 2025*

Savitribai Phule Pune University
